

IN THE SPECIFICATION:

Please replace the paragraph on page 10, lines 12-23, with the following paragraph:

A1
If a user wants to send only the HTML source file **202** via email, the user can simply save the main HTML source file as an HTML formatted document and ~~attached~~attach the saved document to an email note. If the user would like to send one or more resource files **204** associated with the main HTML source file **202**, then the user can save and attach those files to the email note as well. Unfortunately, any folder structure that applied to the original web page will be lost and the links in the main HTML source file **202** may not function properly. To ensure that a functioning web page is delivered to the recipient, the user should "pack" the web page into a file structure that permits the web page to be stored with its resource files, such that the folder structure is maintained.

Please replace the paragraph on page 10, lines 24-30, with the following paragraph:

A2
A method and system for packing a web page's main HTML source file **202** and all relevant resource files **204** into a single MHTML file is disclosed in a co-pending application, also assigned to Microsoft Corporation. That co-pending application has been assigned ~~Attorney~~
Docket No. 13237-2595-U.S. Patent Application Serial No. 09,587,756, filed June 6, 2000,
entitled System for Packing and Unpacking Web Pages _____. The co-pending application is hereby incorporated by reference.
